

SEA SIGNALS.

THE LIGHTS AND SOUNDS THAT GUIDE THE MARINER.

Flashing Lanterns and High Trumpets—Bells That Toll in the Fog—Origin and Extent of Our Lighthouse Service.

EVERYBODY knows what a lighthouse is, and has a general notion of the devices employed to assist navigators, but there are very few, probably outside of the mariners themselves, who realize the tremendous development of the lighthouse service of the world, and how the complete system of the present day has been brought to its present stage by the application of scientific principles and the results of ingenious investigation.

What a vast advantage has the mariner of to-day with all of the modern aids and appliances to direct his course, over the ancient navigator who had to rely upon the stars, or the chance lights upon dark coasts. The light stations of the world to-day are almost as numerous as the visible stars and planets.

The employment of lights to guide the navigator may be traced back to the earliest times. Nightly a beacon flamed from the tower of the temple of Apollo, on Mount Lencas, and the Colossus of Rhodes, like the Statue of Liberty in New York Harbor, upheld a signal light. The real prototype of the modern light towers is the Pharos of Alexandria, erected 285 years before Christ. The Roman conquerors of Britain and France set up light towers along the coasts, but the oldest that exists to the present time is that of Corunna, Spain, built in Trajan's reign, and reconstructed in 1634.

The grandest lighthouse in existence is also one of the most ancient—that at the mouth of the Gironde, in the Bay of Biscay, built in the reign of Henry IV. The tower is 197 feet high, contains a chapel and a series of galleries beautified with plasters and friezes. A new era in the building of lighthouses began with the construction of the wonderful work on the Eddystone rock off Plymouth, England, completed in 1750. There, almost for the first time, was adopted the expedient, now generally employed, of dovetailing, laterally and vertically, the courses of rock which, when covered with hydraulic cement, give absolute solidity to the masonry. Other lighthouses in Great Britain are the Bell Rock, with a tower 100 feet high; the Skerryvore Rock, off the coast of Scotland, which cost nearly half a million dollars; and the Bishop Rock, off Scilly, 145 feet high.

There are now about 6000 light stations in the world, of which 1400 are in America. Even Oceania has over 300, and Africa 220.

The lighthouse establishment in the United States, which is a hundred years old, has cost upwards of \$100,000,000, including maintenance, and the average annual appropriation now is from \$3,000,000 to \$4,000,000.

The patriarch of the lighthouses in this country is that on Little Brewster Island, in Boston Harbor, erected in 1716 by the General Court of the province of Massachusetts Bay.

The expenses of operating it were paid out of tonnage dues.

When the United States took charge of the establishment in 1789 there were eight lighthouses on the Atlantic coast.

To-day there are thousands of lighthouses and beacon lights.

Previous to 1840 the lighthouses were either conical towers of rubble stone masonry or wooden frame towers erected on top of the keeper's house.

In 1847 the construction of six lighthouses was ordered by Congress and executed by the topographical engineers of the army. They adopted the iron pile system and made many improvements in the foundation and frame work.

It has required the best engineering skill to overcome all the difficulties presented by the physical obstacles to a firm and permanent

THIMBLE LIGHTHOUSE, HAMPTON ROADS, VA.

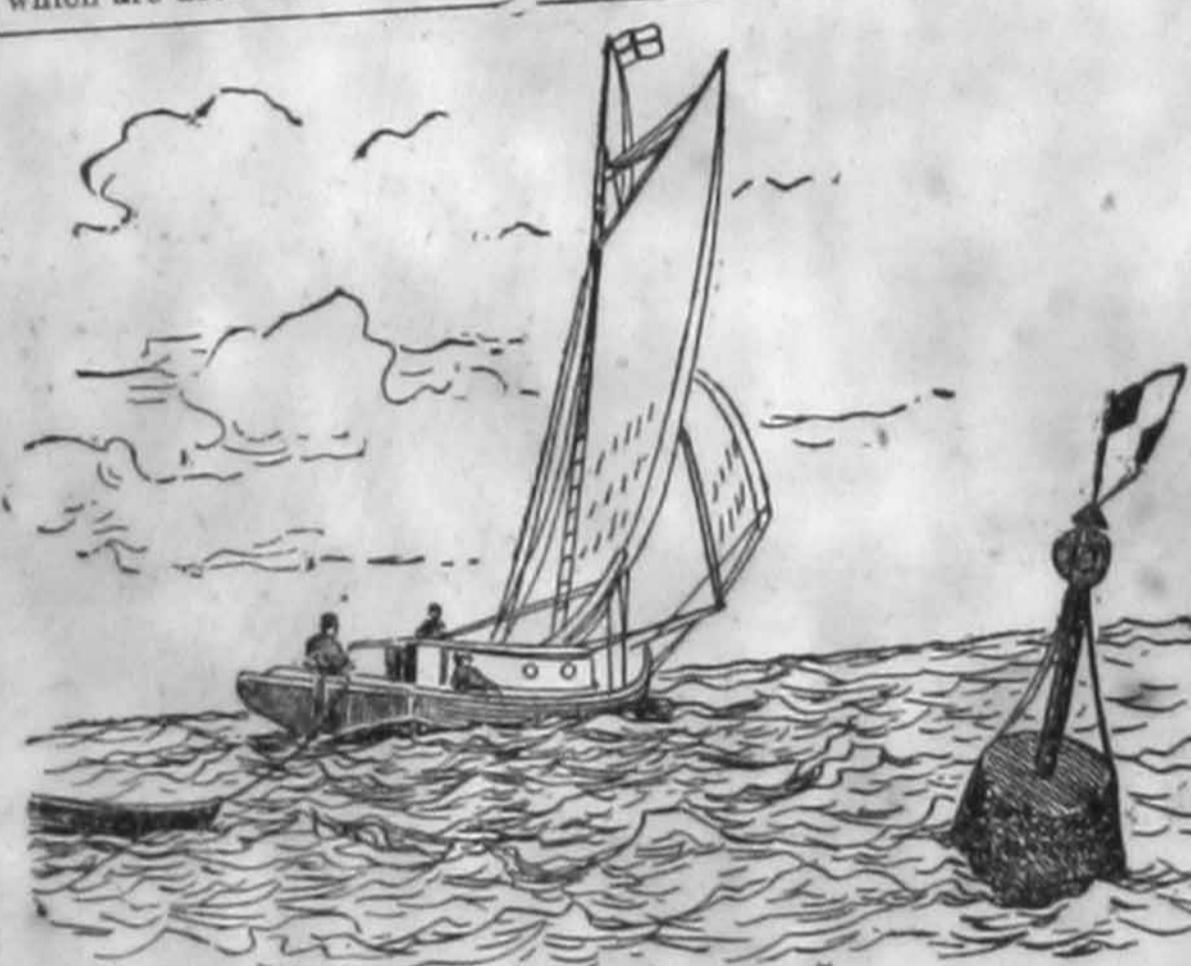

with a range of twenty statute miles. The foundation piles, of twelve-inch wrought iron, rest centrally on iron disks eight feet in diameter and penetrate the rock ten feet. The piles stand at the centre and angles of an octagon which is fifty-six feet across, and are braced together by iron ties. The frame work of hollow iron shafts rises in six section, pyramidal in shape. The keeper's dwelling is in the second section, and is of boiler iron, lined with wood. The cost of the structure, with illuminating apparatus, was \$120,000.

An excellent specimen of the screw pile river or harbor lighthouse is that in the Thimble shoal, off the entrance to Hampton Roads. Another kind of lighthouse is the iron tower which is built on a dry foundation like that at Cape Canaveral, Fla., 150 feet high. Then there are the iron skeleton towers which are used on land, and cost

storms. One now anchored off the coast of Ireland was picked up there six weeks after it had been wrenches from its place in New York Harbor. Buoys are made of iron or wood, and are called nuncahs or ice buoys, according to their shape, and are painted and numbered so as to speak a silent language to the navigator which will tell him whether to go on the left hand or right hand of channels, to keep away from wrecks, or when he comes to the proper turning point.

The illumination of lighthouses is a problem which has taxed the ingenuity of the lighthouse officials and improvements made have been as great as those in the structures themselves. There is a tremendous contrast between the lights employed to-day and the braziers, containing bales of pitch and oakum, which were burned on the coast of Massachusetts in 1713, or the tallow candles used in the original lighthouse on Brewster Island. The magnifying and reflecting lantern of 1812 was an advance on the primitive system, and this was replaced in 1862 by the lenticular apparatus, the use of lenses instead of reflectors. This was a great advance. In some cases lighthouses near cities have been illuminated with gas from the city gas works, or from gas tanks in the lighthouses themselves. Electricity has been employed to a considerable extent for illuminating purposes.

Numerous experiments have been made with illuminants to determine the penetrative power of their lights, but in fogs all lights are useless, and hence other means have to be employed to take the place of lights in heavy weather. The invention and application of fog signals constitute a very interesting branch of the lighthouse service. Of the devices employed may be mentioned gongs, guns, rockets, sirens, trumpets, steam whistles, bell buoys, whistling buoys, and bells struck by machinery. Gongs less than those of the other classes. Then there are the iron skeleton towers which are used on land, and cost

A BUOY ON LONG ISLAND SOUND.

which are sometimes used in lighthouses are adapted to harbors and short channels because the effective range of the sound they emit is under 600 yards. The use of cannon has been superseded, except as signals of distress. Rockets charged with gun cotton, exploded at a height, say, of 1000 feet, make a noise audible at a distance of twenty-five miles. Bells weighing from 300 to 3000 pounds are used at many of the light stations. They are operated by clockwork, but are not considered efficient signals on the sea coast, where the sound is drowned by the noise of the surf. The whistling buoy is a curious and noisy contrivance which generally makes itself heard. It consists of an iron pear-shaped bulb, twice as wide as its largest part, and sticking up twelve feet out of the water. A tube thirty-two feet long runs thirty-three under the control of the Lighthouse Board, one being located in the Gulf off Southwest Pass. The great difficulty is to keep these vessels stationary. Some are moored in the open sea and furnished with powerful lights and fog signals, in spite of which they are frequently run into by passing ships. As these boats cost upwards of \$60,000, and are expensive to maintain, it is deemed economical to replace them whenever possible by lighthouses. As aids to navigation are required not only on the sea and in harbors, but also on rivers, the Government maintains numerous lights on the great waterways of the country. Two thousand miles of the Mississippi River are lighted in this way.

The seaman needs signs and symbols by day as well as lights by night, and the buoy is to him what the sign post is to the traveler on the public highway. It tells him by the size, form and color how to find his way in and out of a harbor. Nearly 5000 are used in the United States, and are raised thirteen volumes annually to describe the names, locations and characteristics of the buoys, and a whole fleet of lighthouse tenders to look after them, to see that they have not changed their position and have them up when they have drifted out of place. They are frequently set adrift either by the action of ice or collision with reefs, or the effect of

sound signals are oftentimes very deceptive, and subject to aberrations, according to the state of the atmosphere, and implicit reliance on them has frequently led to disasters. This matter has been the subject of laborious scientific investigation.

foundation for the structure. Different devices are adopted, according to the composition of the soil bottom. Most of the Southern lighthouses are built on screw piles, which are driven into the sand and other soft materials. They can be readily sunk by the weight of the sand and other soft materials. The first lighthouse built according to this system was at Beaufort, S. C., in 1848. Around the founda-

ONE MAN'S QUEER FANCY.

A NEW YORKER'S WONDERFUL COLLECTION OF TOWELS.

They Number More Than 1300, and Were Gathered From All Parts of the World.

ONE New Yorker has made towels a fad, and he has gathered from all parts of the world an unparalleled assortment of them. Benjamin B. Davenport, a lawyer, better known as the publisher of several books, is the possessor of this unique collection, and at his home at Ashbury Park he proudly displays his store of the towels of all nations, which number 1312.

Mr. Davenport has been engaged for twenty years in the amassing of this bizarre exhibit, which includes towels of cotton, wool, linen and silk. He has been ably assisted by many of his friends. To the acquaintances departing for distant lands Davenport has been wont to say: "Send me a towel from Madagascar," or "While you are in Patagonia pick me up one of the native towels."

By far the greater part of the collection was picked up in the hotels of the United States by Mr. Davenport personally. They vary in size and texture. A thin, silvery cotton rag, through which one might read a newspaper, bears the startling legend indelibly stamped across its limp surface: "Stolen from the Occidental Hotel, Leadville, Colorado." It is evident that the miners had formed the habit of carrying off the towels to various inventions.

The lighthouse establishment of the United States is under the control of the Treasury Department, and the Secretary of the Treasury is ex-officio President of the Board, of which the Chairman is generally a rear admiral. Among the members of the board are two officers of the navy, two officers of the corps of engineers, two civilians of scientific attainments, and an officer of the navy and an officer of the engineers as Secretaries. There are sixteen lighthouse districts, in each of which there is an officer of the navy as inspector and an officer of the engineers as lighthouse engineer.

The keepers of lighthouses were appointed by the earlier Presidents, but, as they became more numerous, nominations were made by collectors of customs, and the appointments made by the Secretary of the Treasury. The nominations are, however, always to be passed upon by the Lighthouse Board, and an examination by an inspector generally precedes the final appointment. The salaries are very small, considering the nature of the service rendered, and its importance. The compensation of keepers ranges from \$100 to \$1000 per year. The keeper must be between eighteen and fifty years of age, and possessed of a knowledge of reading, writing and accounts, and have some mechanical ability. They are furnished with quarters for themselves, and in certain cases for their families, and with fuel and rations. As a lighthouse keeper naturally has a good deal of time on his hands, he is supplied with a library of instructing and entertaining books, containing about fifty volumes. At regular intervals this library is exchanged for another and forwarded to the next station. The Lighthouse Board has nearly 600 of such libraries in circulation. The first regularly appointed lighthouse keeper in this country was George Worthylake, who was keeper of the lighthouse on Little Brewster Island in 1716 at \$250 per year.

Cab and Cycle Combined.

Several weeks ago the cycle hansom made its appearance in London. The occupant of the vehicle had the

THE NEW HANSON.

appearance of being a foreigner, but in his movements he seemed to know the city well. His vehicle was a hansom body on three pneumatic tires, with a front and one behind. The front man, of course, steered, but both helped the propulsion, and they pedaled away over the rough pavement at a pace of nearly eight miles an hour.

The gentleman was making bus calls, and his flunkies were there in ordinary dress, or what those gentry designated as morning clothes. Possibly he makes social calls in his hansom with flunkies in livery.

Others of these vehicles have since been noticed on the street, and it is learned that a large manufacturer in the suburbs has been started to rush them on the market.

Chinese Canning.

In New Zealand, as in California, the Chinese abounds, and there, too, he has to resort to a strategy to make good his position. It is related that in Otago, where Scotchmen are in the majority of the colonists, a contract for mending a road was to be let and the lowest tender was signed "McPherson." Notice was sent to the board and complete the contract. In due time they met, but behold! McPherson was yellow in hue and had an unmistakable pigtail. "But," gasped the president, "your name can't be McPherson?" "Allo lights," cheerfully answered John, "nobody catches Mac." The contract was signed, and the Mongolian McPherson did his work as well as if he had really hailed from Glasgow.—*China Mail*.

There are credible records of over 7000 earthquakes between 1806 and 1894, A. D., and unrecorded ones are said to be more numerous.

SEA SIGNALS.

THE LIGHTS AND SOUNDS THAT GUIDE THE MARINER.

Flashing Lanterns and Hugh Trumpets—Bells That Toll in the Fog—Origin and Extent of Our Lighthouse Service.

EVERYBODY knows what a lighthouse is, and has a general notion of the devices employed to assist navigators, but there are very few, probably outside of the mariners themselves, who realize the tremendous development of the lighthouse service of the world, and how the complete system of the present day has been brought to its present stage by the application of scientific principles and the results of ingenious investigation.

What a vast advantage has the mariner of to-day with all of the modern aids and appliances to direct his course, over the ancient navigator who had to rely upon the stars, or the chance lights upon dark coasts. The light stations of the world to-day are almost as numerous as the visible stars and planets.

The employment of lights to guide the navigator may be traced back to the earliest times. Nightly a beacon flamed from the tower of the temple of Apollo, on Mount Leucas, and the Colossus of Rhodes, like the Statue of Liberty in New York Harbor, upheld a signal light.

The real prototype of the modern light towers is the Pharos of Alexandria, erected 285 years before Christ. The Roman conquerors of Britain and France set up light towers along the coasts, but the oldest that exists to the present time is that of Corunna, Spain, built in Trajan's reign, and reconstructed in 1634. The grandest lighthouse in existence is also one of the most ancient—that at the mouth of the Girondes, in the Bay of Biscay, built in the reign of Henry IV. The tower is 197 feet high, contains a chapel and a series of galleries beautified with pilasters and friezes. A new era in the building of lighthouses began with the construction of the wonderful work on the Eddystone rock off Plymouth, England, completed in 1750. There, almost for the first time, was adopted the expedient, now generally employed, of dovetailing, laterally and vertically, the courses of rock which, when covered with hydraulic cement, give absolute solidity to the masonry. Other lighthouses in Great Britain are the Bell Rock, with a tower 100 feet high; the Skerryvore Rock, off the coast of Scotland, which cost nearly half a million dollars; and the Bishop Rock, off Scilly, 145 feet high.

sound signals are oftentimes very deceptive, and subject to aberrations, according to the state of the atmosphere, and implicit reliance on them has frequently led to disasters. This matter has been the subject of laborious scientific investigation.

FIRST ORDER LIGHTHOUSE, AT ST. AUGUSTINE, FLA.

Sometimes it is almost impossible to tell by the ear the direction from which a sound comes. Different contrivances have been invented to correct the mistakes to which human powers of audition are susceptible. Some of these are very ingenious, but it is without the scope of this article to enter upon a description of the various inventions.

The lighthouse establishment of the United States is under the control of the Treasury Department, and the Secretary of the Treasury is ex-officio President of the Board, of which the Chairman is generally a rear admiral. Among the members of the board are two officers of the navy, two civilians of scientific attainments, and an officer of the navy and an officer of the engineers as Secretaries. There are sixteen lighthouse districts, in each of which there is an officer of the navy as inspector and an officer of the engineers as lighthouse engineer.

ONE MAN'S QUEER FANCY.

A NEW YORKER'S WONDERFUL COLLECTION OF TOWELS.

They Number More Than 1300, and Were Gathered From All Parts of the World.

ONE New Yorker has made towels a fad, and he has gathered from all parts of the world an unparalleled assortment of them. Benjamin B. Davenport, a lawyer, better known as the publisher of several books, is the possessor of this unique collection, and at his home at Asbury Park he proudly displays his store of the towels of all nations, which number 1312.

Mr. Davenport has been engaged for twenty years in the amassing of this bizarre exhibit, which includes towels of cotton, wool, linen and silk. He has been ably assisted by many of his friends. To the acquaintances departing for distant lands Davenport has been wont to say: "Send me a towel from Madagascar," or "While you are in Patagonia, pick me up one of the native towels."

By far the greater part of the collection was picked up in the hotels of the United States by Mr. Davenport personally. They vary in size and texture. A thin, silvery cotton rag, through which one might read a newspaper, bears the startling legend indelibly stamped across its limp surface: "Stolen from the Occidental Hotel, Leadville, Colorado." It is evident that the miners had formed the habit of carrying off the towels to use as shirt fronts.

In contrast to this economical rag there is a roller towl thirty feet in length, secured in an Illinois hotel wash-room. It was what the porter who sold it to the collector called "the house towel."

One set of seven towels, of varying thickness and texture, including a genuine Turkish article that looks like forty cents' worth of tripe, recalls the luxury of a local bath house.

A square section of jute bagging, such as is used to cover cotton bales, was considered quite the thing in a hostelry on the banks of the Yazoo River. A real curiosity is a stiff and inflexible affair found in the composing-room of a Pennsylvania weekly newspaper. It was "the office towel."

There are towels of softest damask, with daintily embroidered initials that call up romantic visions, and there is a section of mummy cloth brought home from Cairo, which might once have been used to dry the moisture from the fair skin of Pharaoh's daughter, or possibly have been tucked under the chin of the infant Moses.

There are towels that are as small as napkins, and towels that would answer for bedspreads. Some are as soft to the touch as the fluffy bosom of the eider swan, and others could be used to grate horseradish upon.

There are dainty French towels and heavy, square German towels, soft Italian towels that give forth a faint odor of garlic; cold, heavily starched towels that come from England; a Scotch towel that is made of tweed; an Irish towel of unbleached linen that will take off the cuticle as if it were made of emery paper; towels from the South Sea Islands that are not towels, but are coco mats; a carefully dressed chamois-skin which came from the Alps; a jeans towel from Indiana; a homespun towel from Kentucky; a Japanese towel of fibrous paper, and a heavy silk towel once owned by Adelina Patti.

Then there are common towels of no particular individuality, that are in the collection, because they were known to have been last used by some celebrity or because there is a tale of adventure, romance or sentiment connected with their acquisition. Mr. Davenport's conscience is never troubled when he contemplates his treasures. Very few of them were accidentally packed into his baggage. As to the conscience of the porters and chambermaids who assisted in the compilation—that is another story. Each of the towels is duly tagged and numbered and a catalogue gives the history of each article.—New York World.

Chinese Canning.

In New Zealand, as in California, the Chinese abounds, and there, too, he has to resort to strategy to make good his position. It is related that in Otago, where Scotchmen are in the majority of the colonists, a contract for mending a road was to be let and the lowest tender was signed, "McPherson."

Notices were sent to the board and complete the contract. In due time they met, but behold! McPherson was yellow in hue and had an unmistakable pigtail. "But," gasped the president, "your name can't be McPherson!"

"All right," cheerfully answered John, "nobody catches me in Otago unless he names Mac." The contract was signed, and the Mongolian McPherson did his work as well as if he had really hailed from Glasgow.—China Mail.

There are credible records of over 7000 earthquakes between the years 1806, B. C., and 1894, A. D., and the unrecorded ones are believed to be still more numerous.

In Poor Health

means so much more than you imagine—serious and fatal diseases result from trifling ailments neglected.

Don't play with Nature's greatest gift—health.

If you are feeling

out of sorts, weak

and generally ex-

hausted, and have no appetite

and can't work,

begin at once tak-

ing the most relia-

ble and safe healing

medicine, which is

Brown's Iron Bit-

ters. A few bot-

ches of this medicine

comes from the

very first dose—

you'll state your

case, and I'd be

pleased to take

it Cures

Dyspepsia, Kidney and Liver

Neuralgia, Troubles,

Constipation, Bad Blood

Malaria, Nervous affections

Women's complaints.

Get only the genuine—it has crossed red

line on the wrapper.

It Cures

Colic, Cramps, Diarrhea, Flux,

Cholera Morbus, Nausea, Changes of Water, etc.

Cuts, Burns, Bruises, Scratches,

Bites of Animals, Serpents, Wasps, etc.

BREAKS UP

Bad Colic, Lie Grippe, Indigestion,

Croup, Sore Throat, etc.

SMELLS GOOD, TASTES GOOD,

SOLD EVERYWHERE AT 25¢ AND 50¢ PER BOTTLE. NO RELIEF, NO PAY.

Attention Confederates.

All Confederate Camps and ex-Confederates in this State, will please take notice, that a Reunion of such Camps and individual Confederates will be held under the auspices of Stonewall Jackson Camp C. V. at Charlestown, Kanawha County, W. Va.,

ON THURSDAY, JANUARY 24,
For the purpose of discussing and maturing plans for the establishment of a "HOME" in this State for helpless and homeless Confederate Veterans.

Without more formal or further notice, all Confederate Camps in the State are requested to send Representatives to this meeting, and all individual Confederates are requested to attend, or that they will get together in counties where there is no regular organization and send representatives, so that every county in the State will be represented.

All the newspapers in the State are requested to donate enough of their time and space to publish this notice until the day of meeting and to call attention to it editorially.

Let there be a full attention to inaugurate this worthy and charitable work for our helpless Comrades, on a sure and permanent foundation.

S. S. GREEN, COMMANDER,
And Chairman Executive Committee.

A Fatal Shooting.

A young Mr. Riddle and two other gentlemen of Franklin, W. Va., were out from town a short distance hunting, the day before Christmas, and while creeping through some very thick under brush, a Winchester rifle in the hands of the gentleman nearest to Mr. Riddle caught on a brush and was discharged. The ball entered Mr. Riddle's head just behind the ear, tearing a large hole clear through his head, killing him instantly. This was indeed a sad accident, and the two young men, when they saw what had been done, were wild with grief.—Highland Recorder.

Wanted - A Reliable Boy.

In every city and town to send him name and address on a postal card, if able to devote a few hours in special work for us in his locality. No canvassing. Experience not required, simple energy and faithfulness. Good remuneration. Name one or more references. Address COBBETT & CO., 723 SANSON STREET, PHILADELPHIA, PA.

The Man, of Alderson, will begin publication anew this week under the auspices of a reliable publisher. Mr. A. C. Houston will be the editor, we are informed, with S. A. Houston as proprietor, and H. P. Mohler publisher. The Man made things warm last fall, and no doubt will help to thaw out the snow-bank in which the Watchman's candidates were entombed on November 6th. It's mighty rough sledding for the party that gets in its way.—Ronceverte News.

J. D. PULLIN & CO.

Very True, but it Kills All Pain.

Bold Everything, Every Day—

Without Relief, There is No Pain.

What is

CASTORIA

Castoria is Dr. Samuel Pitcher's prescription for Infants and Children. It contains neither Opium, Morphine nor other Narcotic substance. It is a harmless substitute for Paregoric, Drops, Soothing Syrups, and Castor Oil. It is Pleasant. Its guaranteed use is thirty years' use by Millions of Mothers. Castoria destroys Worms and allays feverishness. Castoria prevents vomiting Sour Curd, cures Diarrhoea and Wind Colic. Castoria relieves teething troubles, cures constipation and flatulence. Castoria assimilates the food, regulates the stomach and bowels, giving healthy and natural sleep. Castoria is the Children's Panacea—the Mother's Friend.

Castoria.

"Castoria is an excellent medicine for children. Mothers have repeatedly told me of its good effect upon their children."

Da. G. C. Osborn,

Lowell, Mass.

"Castoria is the best remedy for children of which I am acquainted. I hope the day is not distant when mothers will consider the real interest of their children, and use Castoria instead of the various quack nostrums which are destroying their loved ones, by forcing opium, morphine, soothing syrup and other hurtful agents down their throats, thereby sending them to premature graves."

Dr. J. F. KINCHLOW,

Conway, Ark.

Castoria.

"Castoria is well adapted to children that I recommend it as superior to any prescription known to me."

H. A. ANTHONY

Office next door to H. A. Yeager's Hotel. Residence opposite Hotel. All calls promptly answered.

J. M. BARNETT, M. D.,
HAS LOCATED AT
FRONT, W. VA.

Calls promptly answered.

The incorporation of Marlinton has been a subject of discussion for over two years. Lately our contemporary has been pushing the question with very commendable zeal. He misquotes us in a late leader. We had said that it would not be "very just to incorporate without the consent of the company which owns the town" and added, "not to say safe." This is twisted by him into "the scheme is not judicious or safe," and refers to the "position taken" by us. A position is exactly what we have not taken. We have suggested it during the time mentioned above, but no one ever has taken enough interest in the scheme to put it to a vote, up to the present time. This should be done at once. If a half-a-dozen citizens would stand as promoters of the incorporation, there need be no especial expense attached to it, and none whatever if the incorporation is consummated. The steps to be taken are laid down in the Code: There must be one hundred persons, and the boundary not less than one quarter of one square mile. The persons seeking incorporation must cause to be made an accurate map of the territory by a practical surveyor. Also an accurate census shall be taken, verified by affidavit of the census taker. The map and census must be left at some place of access for at least four weeks. Then a notice shall be published for four weeks of the foregoing matters, and that on a certain day a vote shall be taken. We are sure that such notice will be donated by either of the papers of Marlinton, in the event the petitioners fail, at least. The voters when assembled choose three commissioners, and all duly qualified voters who have been bona fide residents of the village six months before any charter election, are voters of that village. If a majority of the qualified voters residing within the boundary come out and vote for incorporation, it is so certified to the Circuit Court, which grants a certificate of incorporation. The only construction to be put on this section is that the voters not voting are counted as voting against incorporation. Then comes the election of officers. Seven of the town officers must be freeholders, and, count as we would, only six were to be found on the East side of the river, eligible to hold office. This is not counting an English gentleman, not naturalized. Before there is any more palaver on this subject, steps should be taken to make an issue.

The present generation is famous among many other things for close calculations and accurate researches. A Genoese journalist to have something original for the Columbian year, undertook to estimate what it cost to discover America in 1492. Columbus had an annual salary of three hundred and thirty-three dollars. The captains in charge of the Nina and Pinta received one hundred and eighty dollars each. The sailors were paid each two and a half dollars per month. The outfit cost two thousand and eight hundred dollars. Total about seven thousand and five hundred dollars. Voyages of discovery are vastly more costly now.

Don't sit in a draught. If you do the doctor will in all probability be the one to catch it.

To the Teachers.

Supt. Barlow gives them a Gentle Reminder. A Word to the Wise.

To the Teachers of Pocahontas County.—The time is now at hand when many of you are engaged in the preparation of your term report to the Secretaries of the Board of Education, and to secure that accuracy and completeness of detail so necessary, is the object of this letter.

The State Superintendent says that almost every mail brings to his office letters of inquiry from the office of the National Commissioner of Education, or from various institutions, states, and nations, regarding our State educational work, and to these interrogatories the department is often unable to make intelligent reply because of the failure or neglect of those charged with the duty of supplying the desired information. We want the report of our schools to be accurate and complete. Reports, blanks, etc., are prepared and distributed to the teachers, and there is not a blank but what should be filled, nor an item to be omitted. The Legislature has made ample provision for collecting and placing the State in possession of valuable information, by furnishing blanks, etc., and the law must, therefore, be enforced by all whose duty it is to see that it is enforced.

The Secretary of the Board of Education is prohibited by law from paying to a teacher his last month's salary until said teacher has delivered to him (the Secretary) a properly kept term register.

Section 8 of the School Law requires the Secretary of the Board to make an annual report to the County Superintendent, but the Secretary cannot make a correct report unless he has received from the teachers reports which are "full and complete."

"Statistics are worthless unless accurate, and the large sum of money expended by the State in printing and distributing the same is a waste if they are not correct in every particular."

Section 19 of the School Law requires the teacher in each sub-district, before the close of his school and not later than the 1st of April in each year, to make an enumeration of all school youths resident in his sub-district. If your school closes after April 1st, make this report on a separate blank that will be furnished you by the Secretary of the Board of Education. The teacher should secure an accurate enumeration, because the distribution of the State school fund is based upon it.

THE GRADE SHEET.

It is the duty of every teacher in the county to properly prepare the grade sheet, and, together with the term register, return it to the Secretary of the Board of Education. The good effect of the entire work of grading our schools will be largely lost unless the grade sheet is properly filled and filed with the Secretary of the district in which the school is situated. See that your work on the grade sheet is accurate for without accuracy it is worthless. Remember that your grade sheet goes into the hands of your successor, and he will rely upon it in classifying his school. Therefore be sure that your work is correct.

I will gladly assist you in any way I can in the earnest work you are doing for the advancement of education, and with the hope that you are having a successful year as teachers, I am most obediently yours,

D. L. BARLOW,
County Superintendent
Edsby, W. Va., January 14, 1895.

A PRIZE of one guinea offered for the best definition of "life," was given to the person who said, "Life, a trial trip before the launch into eternity."

is for the most part on the outside. A false modesty seems to prevent those salutary ablutions which are so necessary to health, and I did not command myself to the good graces of the hired woman by insisting on my foot-bath every morning.

"We remained five days at Huntersville closely engaged in the business of the Court, which I found profitable. Pocahontas is a fine grazing county, and the support of the people is mainly derived from their flock cattle, horses and sheep, which they drive over the mountains to market. There is little money among them except after these excursions, but they have little need of it—every want is supplied by the happy country they possess, and of which they are as fond as the Swiss of their mountains. It is a pretty country, a country of diversified and beautiful scenery in which there is a wealth of verdure and variety which keeps the attention alive and the outward eye delighted."

SEVERAL books of fiction, written for an ethical or moral purpose, seem to have an unprecedented circulation. This indicates that there is an intense yearning for sympathy and instruction on the part of thousands of intelligent, serious people, struggling in the confused twilight that dims the questions of the hour, how to correct social wrongs sustained by social customs. The reader's sympathies are deeply aroused when it is seen that too often it is trusting, confiding women who may be made as it were the moral scapegoat, and as such may be sent into the wilderness to expiate the sins of man. Then, too, the reader's indignation is appealed to in behalf of those jilted by their special friends, when their opportunities for marriage are numbered, and so left to long, loveless lives and unaided battles with the world. Such reading is destitute of faith in Higher wisdom shaping human rough-hewn purposes to a nobler end beyond our earthly vision, and so leaves its votaries without the beams of a higher hope to assist them to win triumphs and evolve light out of darkness, and right out of wrongs. The result will be that ere long it will be asked "who will show us any good?" Then books illustrating the old but ever new necessity of subduing instinctive passion to law, by which the spiritual regeneration of each man and woman will be most happily assured, such books will then be in the fashion.

WHILE the city of Elkins may not be the capitol of the State, for which there are aspirations, yet there is no doubt of there being an immense amount of capital represented by the citizens. The home of Mr. Elkins cost two hundred thousand; near by the home of Hon. Henry G. Davis rated at one hundred and ten thousand; and that of Mr. Kerens in the vicinity costing ninety thousand dollars. The computed wealth of the three residents amounts to one hundred and twenty million dollars.

ONE of the most popular songs among our singing people is "The West Virginia Hills." It may interest some to learn that the writer of these beautiful lines is the wife of the Rev. H. D. King, pastor of the First Presbyterian church at Vineland, New Jersey. Mr. King, a short time since, spent some weeks in our state conducting continued religious services.

SEE TIMES OFFICE for job-work.

There are fewer deaths by railway accidents in Persia than in any other country.

The French have invented an occult science of arithmetic which they call "arithmomancy."

If the United States had as great a relative population as Japan it would have a population of 960,000,000 people.

The number of American horses in Italy, England, France, Germany and Russia is already quite large, is rapidly increasing, and the result of crossing them with the native stock has already proved far more satisfactory than almost any one anticipated.

From a tabular statement published in the Japan Gazette it appears that Japan has altogether 39,601 doctors, of whom only 10,553 are qualified on modern principles; the rest, over two-thirds of the total, being old staggers of the purely native school, the champions of frogs' toenails and burnt joss paper.

There are 20,000 woman cycle riders in New York and New England alone. If possible, the latter staid and conservative locality is more wheel mad than New York, maintains the Dispatch. The enthusiasm has spread to the tiniest towns, and a little mountain hamlet of 300 or 500 souls will have its quota of wheel women.

It is said that horses are cheaper in Idaho, just now, than anywhere else in the world. Ordinary unbroken, ranch-bred horses have been sold at auction, in Boise City, during the last summer, at seventy-five cents a head, and horses broken to harness and the saddle as low as \$2.50, although, as a farmer remarked, "if you want a good team they are surprisingly scarce."

To reach the north pole, an architect, M. Hauin, has proposed to the Geographical Society of Paris the construction of wooden huts one or two days' journey apart. He considers Greenland the most favorable locality for an experiment of this kind. Each of the huts would become in its turn a base of supplies for the construction of the next. As the distance to be covered is about 900 miles, a score of huts would be necessary to establish a route to the pole.

The sacred cattle of India take more readily to American ways than do the people of that land, according to the caretakers of the National quarantine for cattle at Garfield, N. J., where there is a small herd of the animals, imported for Oliver H. P. Belmont. Said one of those men: "Mr. Belmont sent over for the cattle some of the native feed. It is a grain or berry which when ground up resembles ground chicory. The cattle ate it all right, but after a few days here they became sickly. The superintendent gave them some Yankee feed, on which they immediately began to thrive, and now they won't touch the feed sent over with them."

Among the reasons for the almost uninterrupted success of Japan in prosecuting the present war with China is the spirit of sacrifice and generosity exhibited by her people. Voluntary contributions amounting to almost \$15,000,000 have been received by the Government. The Bank of the Nobility, which gives \$1,000,000 outright, has also placed \$15,000,000 interest free, at the disposal of the authorities. The noblemen and wealthy merchants have been most patriotic, and a number of them have contributed more than \$100,000 each. Victory under such conditions is comparatively easy and certain. Pathetic spirit in China with references to the unfortunate conflict presents a melancholy contrast. Unhappily for the Chinese, the same spirit of indifference—in use no stronger words seems to pervade a great part of the army and navy. Admiral Ting himself had to report that seven of his ships remained unseaworthy during the fight on the Yellow; that several officers had to be court-martialed for cowardice, and that it was deemed essential to behind Captain Fung, who had before the beginning of the battle. It appears to be a hopeless task for the Chinese to fight the generalization in their forces.

GAINING WINGS.

A twig where clung two soft cocoons
I broke from a wayside spray,
And carried home to a quiet desk
Where, long forgot, it lay.

One more I chanced to lift the lid,
And lo! as light as air,
A moth flew up on downy wings
And settled above my chair!

A dainty, beautiful thing it was,
Orange and silvery gray,
And I marveled how from the leafy bough
Such fairy stole away.

Had the other flown? I turned to see,
And found it stirring still
To free itself from the swathing flots
And rove the air at will.

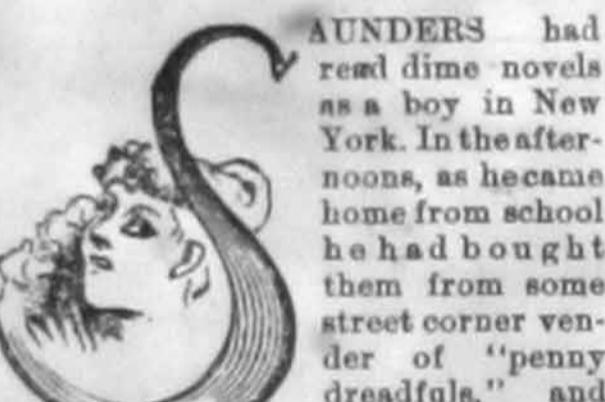

"Poor little prisoned wif!" I said,
"You shall not struggle more!"
And tenderly I cut the threads,
And watched to see it soar.

Alas! a feeble chrysalis
It dropped from its silken bed;
My help had been the direst harm—
The pretty moth was dead:

I should have left it there to gain
The strength that struggle brings;
Tis stress and strain, with moth or man,
That free the fated wings!

—Edna D. Proctor, in *Youth's Companion*.

SAUNDERS'S ROMANCE.

SAUNDERS had read dime novels as a boy in New York. In the afternoons, as he came home from school he had bought them from some street corner vendor. He had gloated over them as only a small boy, born and bred in a great city, can gloot over tales of the West. He had not been discriminating, of course, and had had a natural leaning toward the most blood-curdling recitals; but he had chosen always something in some way connected with army life.

The army was to him a beautiful dream, highly varnished picture, and to be a part of it—a major part, of course, something like a General, or, at the very least, a Colonel—had been from the first his one ambition. But destiny, in the shape of parents of stern and old-fashioned mould, the kind that thought, and accepted it as a convenient creed, that, having inflicted life upon their offspring, they were entirely at liberty to ruin that life—this destiny ordained that he should have a profession other than that of arms; in short, that he should be a lawyer.

Now, Saunders was of an age to judge for himself, and he knew that he was not the stuff of which lawyers are made. Not the slightest vestige of eloquence had he; he was blunt and truthful to a degree. He disliked a lie for its own sake. All this and more he told his parents, but he was answered by the logic which has retarded the world's progress through many generations, that they were older and therefore wiser; that he was their son, and they knew better what was good for him than he could possibly. Saunders, more from a sense of duty than a fear of being disinherited of his father's goodly estates, accepted their decision and began the reading of law.

About this time he chose for a chum a youth whose only possible recommendation must have been that he could boast of army relatives. He had visited in his sallow gosling days at a garrison, and was full of highly spiced tales regarding the wild daring and fascinations of a soldier's life. Saunders would drink in all these stories, and despite his valiant efforts to forget them and put temptation away, they would come back to him as he sat over the inexpressibly stupid folios relating to the law.

One summer this chum of his invited Saunders to visit him at his country house on the Hudson. Saunders went and spent the happiest two weeks of his life. For it was there that he met Madge Kean, the bewitching little daughter of Colonel Kean, of the Tenth. Saunders caught his first glimpse of her as he walked with Milton up the driveway. Madge was armed with a Flobert rifle, and was teaching the little son of the house how to aim and pull the trigger.

There was something in her very pose, in the fact of her knowing how to shoot, that appealed to Saunders at once. He could not see her face, but, nevertheless, he said to Milton that she was a "mighty pretty girl." Milton replied with pardonable pride that the young lady was his cousin, had just come from the far West, was of the army, and a "mighty pretty little flirt." Therefore, before Saunders had even been introduced to the fair Madge, he was perilously near to being in love.

When he stood beside her and Milton was saying, "This is my chum, Saunders; Madge; Miss Kean, Mr. Saunders," when her bright eyes glanced at him from under her long lashes—just like an untamed mustang—when she smiled and put out a hand all sinfully with powder, Saunders thought her the most bewitching woman he had ever seen. And Madge, in her turn, made

note of the fact that Saunders was tall, blond and extremely handsome, with that unmistakable air of self-possession and refinement of a New York gentleman. She determined that he would be much better material to expend her fascinations on than that milk-sop of a cousin of hers. She was glad he had come, and said so. Saunders answered, in a tone which carried conviction, that he also was glad she had come, and Madge blushed through one of those clear, tanned skins which change color with every emotion. Not that she was shy and schoolgirlish in her blushes; they were not a result of timidity.

Cupid did not hit Saunders's heart with the traditional golden arrow this time. It was the tiny bullets of lead which went from the muzzle of the Flobert straight to the bull's-eye of the target that made the wounds which are inflicted sooner or later on every man. By the time the wee cartridge box was empty Saunders was hopelessly smitten.

In the course of the next fortnight he came to that point where he would have even studied law with pleasure had she expressed an admiration for law students. But she did not. He had confided to her all his baffled ambitions; had told her how his soul yearned for shoulder-straps; and she, in turn, told him that the life of a soldier was the only one worth living.

He was too old for West Point; why didn't he try for a civil appointment? This had never occurred to him; he would think it over. He asked her some questions, and confided some of his ideas of garrison life to her. She laughed at them and told him that he was a "dear old tenderfoot." If it had not been for the tone of voice in which she said it, for the roguish, half fond glance from her mustang eyes, Saunders would have been terribly cut up over that scornful word.

"Tenderfoot—tenderfoot," he! After all he had read on the subject. Could it be that his source of information was bad? He did not ask Madge this; however; he never put forth any of his ideas on the subject again, to her; asked for no further information; he knew he was missing golden opportunities for enlightenment, but he did not care to be laughed at. He was aware that nothing would so much injure him in her eyes as to make him look ridiculous. And Madge in that fortnight exerted, first, every charm she possessed, every power she could command, to bring him to her feet.

Having succeeded in this, she used quite as much skill in keeping him from asking her to marry him. She didn't want to be married; she didn't even want to be engaged, and he was only the pastime of a summer's jaunt. Nobody took such flirtations seriously; that is, nobody with any sense. If he couldn't see she was in fun it wasn't her fault, was it? She wasn't accountable for his being deficient in powers of preception, was she? A New York man ought to know how to take care of himself.

Well, the little summer play was over. Saunders went back to town with the secret determination to cut loose from the grind of the law reading to go into the army. He had not told Madge of this; somehow, looking back on it, he hadn't told her anything that he had meant to; he had been half afraid that she would laugh. It would never do to have her laugh.

Of course, there was a big row at his home when he announced his determination. But the breath of free air that he had drawn in from contact with Madge made him see that he should have something to say in the matter of his own career. Moreover, he had the strength of love to uphold him. He surprised his parents by asserting his freedom of action, and when they made it too disagreeable for his self-respect to allow him to stay under their roof he left it, with paternal and maternal misdirections following him. He started in to obtain a civil appointment, and learned more, for he realized his failure, of the nature of human beings and of the struggle for existence than he had ever known before.

It came about that he obtained no civil appointment, and he knew that his father had done his best, covertly, that he should not obtain it. This one thing he could not forgive. Meantime he longed for Madge with the whole power of his heart. He wrote to her and received no reply. So he supposed that she had not got his letter. The thought that she had ignored it did not come to him. The final refusal of a commission was a blow from which he did not recover for some days—he had lost heart for a time; but he read in an Army and Navy that Miss Kean had been desperately ill. That afternoon he enlisted as a private soldier, and the next morning wore the blue.

This was not being a Colonel or a General, but men had risen from the ranks to adduce fame and honor in the books he had read; besides, he was at his last pony. A little wave of disgust ran over him as he learned that \$13 a month, with clothing, bed and board, would be his share of the world's goods. He enlisted with that vague notion, which the average citizen of that day had, that officers and men inhabited peacefully the same quarters; that the barracks-room was a sort of happy-family cage, where

shoulder-straps and chevrons went side by side. He had not stopped to think that the West was wide, and that he might be assigned to a post several thousand miles from the one which his lady-love lighted with her presence. It was not until the deed was done that this came to him, and then he could only hope and pray.

As luck would have it, he was sent to the very post where Colonel Kean was stationed. This did not exactly surprise him; he took it as a matter of course that Providence should interfere in behalf of Saunders—one of the handsomest and most popular fellows in his set. He wondered what his friends at home thought of his escapade. Then he settled down to the discomfort of second-class accommodations in a railway car. Fortunately for him, the garrison to which he was ordered happened to be very near to the railroad, and he was spared a cross-country trip of a hundred or two miles.

Words cannot paint the miseries that Saunders went through. They were not physical miseries, for he was well sheltered, well clothed, not over-worked, and was spared the humiliation and pain of the raw recruit, who learns for the first time to bestride a bare-backed horse. Saunders was an old hand at steepchase, and had little to learn, save a few technicalities.

He did not even see Madge for three days, but was induced to overcome his predetermined to call upon her. He saw within an hour after he had stepped upon the reservation that he would hardly be welcome. It was bad enough not to be able to see his divinity; it was infinitely worse when, at last, he met her. She gave a great gasp and start, blushed, and returned the bow, with just the slightest nod and condescending smile. He saw with dismay that he was to her simply a manial—that he could not dare to overstep the line which divided them.

He got over his desire to shoot himself every time he was given an order all he had read on the subject. Could it be that his source of information was bad? He did not ask Madge this; however; he never put forth any of his ideas on the subject again, to her; asked for no further information; he knew he was missing golden opportunities for enlightenment, but he did not care to be laughed at. He was aware that nothing would so much injure him in her eyes as to make him look ridiculous. And Madge in that fortnight exerted, first, every charm she possessed, every power she could command, to bring him to her feet.

Having succeeded in this, she used quite as much skill in keeping him from asking her to marry him. She didn't want to be married; she didn't even want to be engaged, and he was only the pastime of a summer's jaunt. Nobody took such flirtations seriously; that is, nobody with any sense. If he couldn't see she was in fun it wasn't her fault, was it? She wasn't accountable for his being deficient in powers of preception, was she? A New York man ought to know how to take care of himself.

Well, the little summer play was over. Saunders went back to town with the secret determination to cut loose from the grind of the law reading to go into the army. He had not told Madge of this; somehow, looking back on it, he hadn't told her anything that he had meant to; he had been half afraid that she would laugh. It would never do to have her laugh.

Of course, there was a big row at his home when he announced his determination. But the breath of free air that he had drawn in from contact with Madge made him see that he should have something to say in the matter of his own career. Moreover, he had the strength of love to uphold him. He surprised his parents by asserting his freedom of action, and when they made it too disagreeable for his self-respect to allow him to stay under their roof he left it, with paternal and maternal misdirections following him. He started in to obtain a civil appointment, and learned more, for he realized his failure, of the nature of human beings and of the struggle for existence than he had ever known before.

It came about that he obtained no civil appointment, and he knew that his father had done his best, covertly, that he should not obtain it. This one thing he could not forgive. Meantime he longed for Madge with the whole power of his heart. He wrote to her and received no reply. So he supposed that she had not got his letter. The thought that she had ignored it did not come to him. The final refusal of a commission was a blow from which he did not recover for some days—he had lost heart for a time; but he read in an Army and Navy that Miss Kean had been desperately ill. That afternoon he enlisted as a private soldier, and the next morning wore the blue.

This was not being a Colonel or a General, but men had risen from the ranks to adduce fame and honor in the books he had read; besides, he was at his last pony. A little wave of disgust ran over him as he learned that \$13 a month, with clothing, bed and board, would be his share of the world's goods. He enlisted with that vague notion, which the average citizen of that day had, that officers and men inhabited peacefully the same quarters; that the barracks-room was a sort of happy-family cage, where

shoulder-straps and chevrons went side by side. He had not stopped to think that the West was wide, and that he might be assigned to a post several thousand miles from the one which his lady-love lighted with her presence. It was not until the deed was done that this came to him, and then he could only hope and pray.

As luck would have it, he was sent to the very post where Colonel Kean was stationed.

So he waited his chance for four days, and then "bolted," as his comrades termed it. He went away from the railway, thinking that he would put those who were sent after him off the scent, and after a day or two circle round to reach the iron road, which would lead him far from all this.

On the third day, as he trudged onward to the railroad, dodging like a hunted criminal behind every clump of mesquite or greasewood, he was overtaken, his hands tied behind his back, and marched back to the post under guard.

At a turn of the road the road drew aside and waited for an ambulance to pass. The soldiers saluted the officer inside.

Saunders could not salute; his hands were tied. He knew the officer—it was the first lieutenant; he was going to the station with his bride. Madge looked out and saw the deserter—saw him and turned her head.

—San Francisco Argonaut.

SCIENTIFIC AND INDUSTRIAL.

Cinnamon kills the typhus microbe. Children's first teeth have a great effect upon the second set.

Soap is one of the best known sterilizers of water suspected of infection. Substitute for glass is made from collodion wool and is flexible, not brittle.

The fiber of nettle weed is being used in the manufacture of textile fabrics.

The phosphorescence near the Cape Verde Islands is at times so bright that one can easily read the smallest print.

Spontaneous combustion occurs in many substances because during fermentation heat is evolved and inflammable gases are engendered.

A closed room is bad for sleeping, because air once breathed parts with a sixth of its oxygen, and contains an equivalent amount of carbonic gas.

The Franco Militaire says that the French and Spanish Governments have agreed to the boring of two railway tunnels through the Pyrenees to connect the two countries at Saint Chiron and at Oloron.

It is estimated that 12,000,000 tons of coal are used for gas making annually in England. A train of coal wagons three miles long, each wagon holding a ton, would be required to bring into London the coal for an hour's supply of gas.

That lizards will catch and eat butterflies is stated by Jane Frazer in an article in a London entomological journal. In the Samoan Islands she saw a "skipper" butterfly when lighted caught and instantly swallowed by a beautiful golden-green lizard with a bright blue tail.

A living specimen of the largest and most deadly snake known (*Ophiophagus elaps*) has been added to the Zoological Gardens of London. It grows twelve to fourteen feet in length, and is hooded like the cobra. It occurs in India, Burma and in the East Indian Archipelago, living in forests and jungles and readily climbing trees.

It has been discovered that microbes capable of germination exist in the ocean everywhere except at great depths. They seem to be more plentiful in the Canary, Florida and Labrador currents than elsewhere, and are not detected in the ocean bed. They are, however, plentiful at a depth of 1300 feet, and are found as far down as 3500 feet—certainly deep enough for all practical purposes. Some of these microbes are phosphorescent, and are found on the bodies of living fish.

Cheap Meals.

Two English institutions, framed in the interests of workingmen, might well be adopted in our large cities. In London, Liverpool and half a dozen other places there are located in the main streets handsome coffee palaces, where a cup of tea or coffee, with sugar and milk, and a slice of bread and butter can be obtained for three cents. There are other cookeries to which a workman takes the slice of raw meat he will bring with him from home in the morning. In the noon hours this is cooked for him on a gridiron, and he is supplied with knife, fork, salt and pepper for three cents. Six ounces of bread with butter can be added for six cents.—St. Louis Star-Sayings.

Figs Growing in California.

For 1891 the output of cured figs in California was 360,000 pounds. The increase since that time has not been as rapid as in other branches of production, so that it is not likely that a million pounds of merchantable figs are yet produced in that State. The quality of the product has, however, greatly improved, and the prejudices in favor of the imported article are slowly giving way, so that all conditions are favorable to an almost unlimited production.—New York World.

It is said that a photograph can be taken 300 feet under water. We have seen several that ought to be taken there.—Chicago Dispatch.

HAPPY ON THE WAY.

Partridges a-callin',
Hockey nuts a-holler,
Country jays a-mimic all around;
Cattle bells a-chinkin',
Hawks frost a-squeaking,
Spicy-like, an' sweetens all the ground!
By day, the sunshines streams,
By night, the sweetest dreams—
Country just as happy as can be!
Not a bit o' trouble—
Braggle-on an' double,
The juicy joy few rains on you an' me!

—Youth's Companion.

THE "SULTAN" MYSTERY.

BY W. CLARK RUSSELL.

I, who went in her as chief mate, am named William Fletcher.

We carried no second officer. Often it happened in those days that even big ships sailed with what is known as an "only mate," who was supposed to comprise in himself all that was to be expected in the shape of duty and knowledge from a first and second officer.

As I, however, held no certificate as "only mate," I signed as chief, and the boatswain, a man named Benjamin Matthews, took the working part of second mate under me; that is, he relieved me when my watch was up, walked the decks and trimmed sail at his discretion. But he took no part in the navigation of the ship; indeed, I doubt if he knew what a sextant was, and I am not sure that he could read or write.

Captain Jortin was a tall, lean, long-faced man, with so remarkable a fall of chin that his mouth seemed to be placed almost exactly in the middle of his face. His skin was yellow; he had followed the sea for many years, but the flesh of his cheeks reflected nothing of the glow and bronze of sun and weather.

His eyes were of a dead black, like an East Indian's, without animation in their glance, and slow in their motions.

I had been struck by the figure he made when I first boarded the ship in the docks. Nothing could less correspond with the traditional notions of the old salt, with purple nose and bow legs, eyes deep sunk by peering to windward, and a stormy voice broken by years of drink and bawling, than this master of the ship Sultan, buttoned up as he was in a coat of clerical cut, his black hair smeared smooth as though his head was painted, limp stick-up collar and long, square-toed Wellington boots.

All went well with us till we had gone clear of the northeast trade-wind and struck the "Humbugging" parallels, as they are called, where you get sheet-saline with a wide ocean white as a level ice-field, then faint draughts crawling up in the direct line of the ship's course, painting the burnished surface with the darkling shadows like huge marine spiders creeping down from the edge of the horizon. I think our latitude was between eight and ten degrees north when, what I am going to tell you about happened.

It was the second dog-watch; the hour about half-past six; the ship's yards were braced well forward, and she was rippling along to the pressure of a three-knot breathing of air, coming hot as steam from out of the glowing pavilions of the west.

It was sickeningly close, with the menace of an electric storm in a dillate winking of violet dumb lightning away down in the southeast, where the shadow of the night was gathering, with a large star already trembling low down over the sea right astern.

A giddie was going upon the fore-castle-head. A sailor was chanting a dirge to the tune. Most of the ship's company were listening, hanging about the cathead and against the rail, pipes in mouth. Their open shirts disclosed their mossy breasts, their legs were bare to the knee for the comfort of the coolness, and their be-dewed faces reflected the angry red in the west as though every man had colored himself.

The captain was walking aft, alone, measuring a space of the deck from abreast of the wheel and something forward of the mainmast rigging. His gait was that of a man in a funeral procession—stiff, solemn, self-conscious.

He had not been on deck above half an hour, and in that time had not once addressed me. Not, indeed, that there was anything unusual in this; mates and captains seldom conversed at sea.

The master lived a life apart; and this spirit of isolation possessed the mate, insomuch that I have not oftened who desired to see that throughout a round voyage running into a couple of years they scarcely exchanged more than routine sentences and moments of duty with the ship-

mates aft, from the first hour of their getting their anchor to the final hour of their letting it go.

But even had Captain Jortin been sociably disposed, he was not a sort of man I could have got on with. No one with the weight of a grievous sin upon his soul could be more melancholy and austere, more abrupt and reserved.

Matthews, the boatswain, thought to explain the man by telling me he had heard before we sailed that he had lost his wife and only daughter within a week after his return from his last voyage; but the captain never mentioned the subject nor could I satisfy myself that there was any suggestion of mourning, in that way, either in his clothes or his behavior.

I had charge of the ship this dog-watch, and was standing at the head of the starboard poop ladder, listening to the music forward. Suddenly the steward came out of the cabin under the cuddy front, and looked up at me with a white face.

I called down, "What is it?" interpreting his expression of fear into something wrong. He came half-way up the ladder and said:

"Some one's been trying to scuttle the ship, I think. I can hear water running in 'twixt the wall and the hullin' in the after cabin in the steerage."

I instantly ran aft and repeated the man's statement to the captain. He looked at me steadfastly with his grave, funeral black eyes, and exclaimed in a dull slow way:

"Scuttle! Nonsense, sir! Who would commit such a crime aboard this ship?" Go below with the steward, and report what you hear and see."

I was astonished by his cool reception of a piece of news that whether the steward was mistaken or not, must be charged with significance, even in the lightest, most careless whisper word.

I straightway descended the companion-steps, and the steward followed me by way of the cuddy front. We entered the steerage, a part of the hold under the saloon or cabin deck. Four cabins were bulkheaded off on either hand. They were now used mainly as store-rooms; in their day they had been stocked with passengers, for the Sultan was an old ship, and fifteen years earlier than the date of this story had not been without renown as a brisk, comfortable, roomy "liner," with regular sailings from Blackwall for Australian ports.

We entered the after cabin on the port side and stood listening. A small heave of swell ran through the lightly wrinkled sea. Sounds of the straining of cargo, in the hold were audible, and you could now and again hear the sudden shock and jar of the huge rudder turning with the swell, then sharply arrested by its gear. But there was no need to harken long.

In a minute or two I distinctly heard a fountain-like running of water. It was nearly dark. I bade the steward jump for light; he returned with a lantern, and on throwing the light against that part of the lining or inner wall, whence the trickling noise proceeded, I instantly discovered two auger-holes neatly plugged.

"Good mercy!" I shouted, in a sudden fright; "the ship has been holed, and will be sinking under out feet as we stand here."

I told the steward to remain in the cabin with the lantern, and rushed on deck, shouting for the carpenter to lay aft. Whilst Shirley was coming I reported what I had seen to the captain, who stiffened himself with a dramatic start of surprise.

Muttering in a low, solemn, preaching voice, "Is it possible? Who has done such a thing?" he went below with more alacrity than I had ever before witnessed in him.

I hastily explained the steward's discovery to the carpenter, who rushed forward to his tool-chest. He came along quickly with the boatswain, and we three went below, where we found the captain in a listening posture, viewing the plugged holes by the light of the lantern he held.

The carpenter quickly whipped the plugs out, and sure enough, in the outer side, or wall, of the ship where they plied the braces or stood most, waiting to relieve the pumping gong. The captain called me and asked if I had any suspicion.

"None, sir," I answered. "I can't imagine any man aboard capable of so diabolical a crime."

He took several turns, lost in thought. I saw him now, pacing about me, skewed up as a sort of frayed coat, hands behind him, figure erect.

The deck had gathered around; the sky was full of brilliant stars, a breaking sheet of prisms and crystals, with

a scar of young moon in the west and a great play of lightning down upon our port quarter. Presently the captain stopped and addressed me afresh; but our talk led to no other conclusion than this—that some one aboard had attempted to scuttle the ship.

All hands passed a very restless night. Captain Jortin was incessantly up and about. During the middle watch, which was mine, his shadowy figure was repeatedly shaping itself out of the companion hatch, and fitting in a ghostly fashion about the deck.

I had some earnest conversation with the boatswain and carpenter, but none of us could make head nor tail of this piece of rascality, nor in the dimmest degree conjecture who was the villain who had attempted the atrocious act.

I went below at eight bells—that is at 4 o'clock in the morning—first taking care to go the rounds of the after part of the ship, very carefully looking into each cabin and peering and listening. Somehow I had a fancy that there might be a stowaway on board, intent on a criminal purpose, in league, for all I knew, with some one interested in the vessel to defraud the underwriters. Seeing and hearing nothing, I withdrew to my berth and turned in.

I slept soundly, and at eight o'clock turned out and went on deck. The first person I met was the boatswain, Matthews. He said to me: "The captain seems to have made up his mind, sir."

"On what?"

"As to the man who's holed the ship."

"Have they discovered him?"

"Jackson's in irons. That's all I can say, sir," he answered, with a singular expression of incredulity and temper in his face.

Just then the captain came out of the cuddy, and Matthews went sorrowfully.

"Mr. Fletcher," said Captain Jortin, beckoning me to him, and speaking in a low, level preaching voice, "we shall be able to prove that Jackson's the man who attempted to scuttle the ship."

"Indeed?" said I, vastly astonished. Jackson was an able seaman in my watch. I had always found him a respectable, willing, alert sailor. "What in that man has excited your suspicion, sir?"

"I heard him muttering the other day," said he, "when he was at work on a sail stretched along this poop. Every time I passed he glanced askance at me and muttered. I don't like the man's looks. He has a hangdog face. Then again, yesterday afternoon he was observed to go forward as though he was just come out of the cuddy."

"Who saw this, sir?"

"It's so," he answered, abruptly, with a short, spiritless stare at me, and then stepped to the binnacle.

In the course of that morning I asked the steward if it was true the man Jackson had been seen to walk out of the cuddy. He answered that, happening to come up through the steerage hatch, he had seen Jackson going forward close from the cuddy front as though the man had just stepped from the cuddy itself.

"Well, but," said I, "you were in the steerage, and had been there with an auger, you'd have seen him, wouldn't you?"

"I don't think it was him that did it," said he.

I looked hard at him; for to be sure, if the thing was not the work of a stowaway—of some one hidden in the steerage—it must at least be the act of a person living aft with access, without suspicion, to the cabins.

Well, nothing happened for three days after this. Then, as I well remember, it being a very beautiful, glowing forenoon watch, the wind a light breeze aft, and the ship swaying upon the delicate pulse of swell with scores more than steerage way on her, the carpenter came from the pumps, where he had been sounding the well, and standing under the break of the poop, with the sounding-bell in his hand, called up to me:

"There's three foot of water in the hold, sir!"

The steward was on the main deck when this was said, and instantly ran into the cuddy. The captain was walking aft. I bawled the news to him, and added that if the ship had not been scuttled astreath she had sprung a leak.

Told me to call the carpenter on to the poop; and just then the steward, white as a sheet, came rushing up the companion-steps, crying out, as he sprang through the hatch, that he could hear the water running into the ship in the same cabin where the holes had before been discovered.

The captain ran below as stiffly as his stiff, angular figure would permit. I and the boatswain and carpenter and steward followed. On entering the cabin we immediately heard a loud noise of cascading waters.

It was high morning, and there was plenty of light. This time the would-be scuttler had given himself as little trouble as possible; he had simply knocked out the plugs from the ship's side, leaving the holes in the skin open.

The carpenter rushed forward for tools and a known-has-to serve as plugger. Once again the leak was the tool to the plugged orifices. The

stopped, and as on the former occasion, on our returning on deck the pumps were manned and the hold freed from water.

But now the sailors grumbled furiously. First they insisted on Jackson being released; next on the ship being narrowly searched.

From ten o'clock till four bells in the afternoon watch we were employed in overhauling the vessel. We probed every nook and cranny of her from the forecastle to the lazaret, diligently seeking likewise for any signs of a hidden man in the steerage—all to no purpose. The villain, whoever he was, must certainly be one of the ship's company.

For my part, I suspected the steward, and so did Shirley, the carpenter; Matthews did not know what to think.

The captain stalked apart, gloomy and silent.

That evening, in the first dog-watch, I was in my cabin smoking a pipe, turning over in my mind some scheme for protecting our lives by stationing a watch day and night aft, and wondering if Captain Jortin would see his

him to his cabin, locking him up in it, and then came to me.

To end this singular experience: The crew insisted upon my taking command, and practically forced me to navigate the vessel to Buenos Ayres. They would not suffer me to free the captain, who they feared would serve them some diabolical trick if I gave him his liberty.

As for him, he solemnly declared over and over again to me that he knew not what he had done, and that he had a trick of walking in his sleep.

On the arrival of the ship I went to the British Consul with my report, and he thought proper to take charge of Captain Jortin with a view of sending him to England in a British man-of-war that was then lying at Buenos Ayres. The Consul shook his head when I talked of sleep walking. He said:

"He must have brought the anger abroad with him; it formed no part of the carpenter's tool chest. Next, the ship was scuttled in daylight; I cannot somehow reconcile somnambulism with sunshine."

It was to remain a mystery, however, to the end. I was detained at Buenos Ayres by a number of our men running, and before the ship sailed the news came aboard that Captain Jortin had been found dead in his bed. The doctors found that he had died from apoplexy.

Thus the mystery remains. It never could be shown that the unfortunate man had any motive in scuttling the ship. He had no risk in her; but his command of her was a living to him, and the foundering of the vessel could only have proved an injury to himself.

Possibly madness was the true solution, though it does not quite explain, to my satisfaction, why it was that he went to sea with an auger in his cabin.

—Youth's Companion.

Killed the Father of Rattlers.

The largest rattlesnake ever killed possibly in the entire State of Georgia was killed Saturday afternoon in the East Macon district. It had twenty-two rattles and a button, making it twenty-three years old. A snake that carries fourteen or sixteen rattles and a button is considered a morsel in these parts, and is looked upon with most respectful bearing.

The men had quite an exciting time killing the snake. None of them dared go within several lengths of him, and when he shook his mighty bunch of rattles the noise was awful, and struck terror to the hearts of the spectators, causing them each time to retreat farther. They finally dispatched him with a long pole.—St. Louis Globe-Democrat.

A Wild Ride on a Deer.

Dr. and Mrs. Derby, of Riverside, were guests of Mr. and Mrs. J. T. Leonard, of Moreno, recently. Dr. Derby is an expert hunter, and when Mr. Leonard mentioned that there were deer in the hills back of his ranch his friend was eager for a hunt.

After tramping the hills for several hours they started a deer. The doctor fired and the animal dropped. Elated over the prospect of having killed a deer the hunter pulled his knife, threw his leg over the animal and grasped one of its horns. No sooner had the knife prickled the skin than it jumped to its feet and started bounding over the grade, the astonished hunter on its back.

Mr. Leonard at last found his friend in a sumac bush, head downward, his clothes tattered and torn. It seems that the shot had only stunned the buck, and the prick of the knife had revived it. —Moreno (Cal.) Indicator.

The Head-Hunting Nagas.

Professor Peal, the ethnologist, recently described to the Asiatic Society the condition of the head hunting Nagas on the borders of Assam. The women are to blame for the continuance of the practice; they taunt the young men who are not tattooed, and the latter go out and cut off heads to exhibit to them, fully half of which are those of women and children. The areas occupied by the tribe is not more than twenty miles square, but during the past forty years more than twelve thousand murders have been committed for the sake of these gaudy trophies.—Chicago Herald.

The largest and most beautiful emerald in the world is in the possession of the Maharajah Ki Koo, of India. It is six inches in length, one inch thick and two inches in width.

POCAHONTAS TIMES.

Entered at the post-office at Marlinton, W. Va., as second class matter.

TEACHER: "Illustrate the difference between 'acclimation' and 'acclamation'?"

PUPIL: "Mr. Elkins had hardly become acclimated to the climate of West Virginia, before he was elected Senator by acclamation in the West Virginia Legislature."

TEACHER: "Right, go up head!"

OLD WAITE, is the best name we can give to the man of "bloody bridle" fame. He has a lecture entitled, "Who is our Fat Friend," in which the chastened Grover Cleveland is done up in greatest. Dana Waite, and herself are three who have not been well pleased with the way things have been going.

Of course every one was sorry to hear that Mayor Strong, of New York, opened the saloons on Sunday, but when we found he had done it without consulting Dr. Parkhurst, we were more than glad. When the good man heard it he was hurt and grieved, and virtually said that he had thought that he was the power behind the throne that was running New York. This comes as a blow to the Democratic Prohibitionists who supported Mayor Strong on the grounds that he would knock out rum. This is a split in the faction within the first month of its reign.

A Native Product.

A short time since the writer attended a public meeting held at night. As is usual in country meetings, we may have lingered as the crowd broke up to catch one more sweet smile, any way we were startled to hear some wild yell outside the building which fairly made the house tremble. It sounded like a band of Comanche Indians, who are noted for their disagreeably loud yells. On rushing out we found that this unseemly noise came from an unfortunate class of young animals known as bumphkins (*genus idiota*), all members of which have much in common.

By a little thought and research we were able to find out a good deal about the bumphkin. It is a terror in country neighborhoods, where the law against disturbing public meetings is not rigidly enforced. It is a young man who is just trembling in the balance between making a tolerably decent citizen or a regular outcast. The bumphkins herd together, insult passers, are not only inattentive at church, but absolutely noisy, and take every opportunity of thrusting themselves into notice. By-and-by half of them will have become so criminal that they will behave themselves in public, and the other half will groan inwardly when they think what fools they once were. To be on the safe side a boy should "keep it down," for to be a bumphkin is to be noisy and loud, and to pass in the eyes of those around him as an awkward, rustic nuisance.

On Competition.

"There once was two cats of Killenny,
Each thought there was one cat too many,

So they quarreled and spit, and they scratched and they bit,
Till, excepting their nails and the tips of their tails,
Instead of two cats the wren's aay."

Longing is God's first heavenward will.
With our poor earthward striving
We quench it that we may be still
Content with merely living;
But would we learn that heart's full song
Which we are hourly wronging.
Our lives must climb from hope to
hope
And realize our longing—Loved

The legislature.

NEW ADVERTISEMENTS.

Thomson's Magistrate's Manual and Forms

has been Revised to this date and the Second Edition, just printed, contains about Three Hundred Forms, which should be in the hands of every Lawyer, Justice, Constable, Notary and business man of West Virginia. It contains forms in Civil and Criminal proceedings under the Code of West Virginia for Justices of the Peace, Constables' etc., and Forms for Attachments, Suggestions, Judgments, Arbitration, Unlawful Detainer, Detinue, Acknowledgments, Deeds, Bill of Sale, Power of Attorney, Notices, Deposits, Bonds, Wills, Affidavits, Liens, etc.

The Forms are numbered consecutively, and in a copious index are referred to under appropriate captions, all references being by section and chapter to the Code of West Virginia (1891) and the Acts since then.

The volume will be delivered prepaid by mail or express, on receipt of One dollar, net.

MARCELLUS M. THOMSON, Clarksburg, W. Va.

TRUSTEE'S SALE OF A VALUABLE LOT NEAR MARLINTON.

BY VIRTUE of a deed of trust executed by C. Z. Heyner and S. E. Heyner his wife to S. L. Brown, trustee; dated on the 25th day of July, 1894, and of record in the clerk's office of the county court of Pocahontas county, West Virginia, in deed book No. 25, on page 851, to secure the payment of a certain bond executed by said C. Z. Heyner, for \$500 with interest thereon from the 7th day July, 1894, payable to T. W. G. French, which bond is fully mentioned and described in said deed of trust, and default having been made in the payment thereof, and being required in writing so to do, by said T. W. G. French, the beneficiary under said deed of trust, I. S. L. Brown, as trustee aforesaid, will on

SATURDAY, FEBRUARY 9TH, 1895, between the hours 10 a. m. and 4 p. m. at the front door of the courthouse of said county of Pocahontas, West Virginia, proceed to sell by way of public auction, to sell to the highest bidder, for cash, the property conveyed by said deed of trust or so much thereof as may be necessary, to satisfy said debt, interest, and costs attending the execution of this trust, said real estate lying and being in the said county of Pocahontas near the town of Marlinton on the Marlin's Bottom and Leesburg turnpike, consisting of two and 1-6 acres of land, conveyed to said C. Z. Heyner by one William Killingsworth, and wife, by deed dated the 5th day of May, 1894, and recorded in said clerk's office, in Deed Book no. 25, page 267, to which deed reference is here made for a more particular description of said land.

Said tract of land is unimproved but would make a good building site.

S. L. BROWN, Trustee.

ANDREW PRICE, Attorney.

Commissioner's Notice.

COMMISSIONER'S OFFICE,
Marlinton, W. Va. Jan. 7, 1895.
James M. Simmons,
vs.
R. H. Simmons, et al.

in Chancery.

PURSUANT to a decree of the Circuit Court of Pocahontas county rendered in the above styled cause on the 24th day of October, 1894, I will proceed, at my office in the town of Marlinton, Pocahontas county, West Virginia, on Friday, the 15th day of February, 1895, to take, state, and report to the next term of said circuit court the following matters of account, to wit:

First. An account showing all the existing liens against the real estate of the said R. H. Simmons, together with all their dates, dignities, and priorities.

Second. An account showing the real estate of the said R. H. Simmons subject to the liens aforesaid.

Third. Any other matter deemed pertinent by myself or required by any party in interest to be stated.

W. A. BRATTIN, Commissioner.

[1-11-95-4t]

TO all persons holding liens by judgment or otherwise on the real estate or any part thereof of R. H. Simmons.

In pursuance of a decree of the circuit court of Pocahontas county, made in a cause therein pending, to subject the real estate of the said R. H. Simmons to the satisfaction of the liens thereon, you are hereby required to present all claims held by you and each of you against the said R. H. Simmons, which are liens on his real estate or any part of it, for adjudication to me at my office in the town of Marlinton, Pocahontas county, West Virginia, or before the 15th day of February 1895.

Given under my hand this 14th day of January, 1895. W. A. BRATTIN, Commissioner.

Commissioner's Notice.

Office of Commissioner L. M. McClintic, Marlinton, W. Va. Jan. 9th, 1895.
George C. Hill's Adm'r.

vs.

Rebecca J. Hill and others.

NOTICE is hereby given to all parties interested in the above styled cause that pursuant to a decree entered in said cause on the 18th day of October, 1894, I will proceed, at my office in the town of Marlinton, Pocahontas County, W. Va. on the 20th day of February, 1895, to take, state, and report the following matters of account, to-wit:

1st. A statement of the account of R. W. Hill, Administrator, cum testamento annexo, of George C. Hill, dec'd.

2d. An account of all the debts against the estate of George C. Hill, dec'd, showing their several amounts, priorities, and the persons to whom payable, and showing the amount of the debts mentioned in decree in this cause made October 21st, 1894, exactly as stated in said decree.

3d. A special statement of all debts against the estate of George C. Hill, deceased, discharged by the administrator thereof, together with the amount of such debts as should have been liquidated from the personality of said estate, and showing the amount of such debts discharged by the administrator to which he is entitled to be substituted as creditor against the real assets of said estate in lieu of the creditors whose claims he has discharged.

4th. A statement showing all the costs of this suit and to whom due.

5th. Any other matter deemed pertinent to the commissioner or required by any party interested to be specially stated.

At which time and place you may attend. L. M. MCCLINTIC, Commissioner.

[1-11-95]

Looking Backward

MAY BE A PLEASING PASTIME,

But we take more pleasure in "Looking Forward" to the time when the population of this county will all have become convinced that at my establishment is the best place to buy anything in the mercantile line than anywhere else in the county.

Dry Goods, Notions, Boots, Shoes, etc.

YOU MUST EAT!

Since it is a self evident fact that you must Eat to Live, or Live to Eat I desire to present to your consideration my complete stock of

Trustee's Sale.

By virtue of a deed of trust executed by D. W. Loudermilk and Susan J. Loudermilk, his wife, to L. M. McClintic, trustee, to indemnify and save harmless Withrow McClintic as endorser on a certain negotiable note of the sum of \$167.46, dated on the 5th day of June, 1894, and payable four months after date at the Bank of Ronceverte, Ronceverte, West Virginia, and any renewal of said note, said deed is dated on the 5th day of June, 1894, and is recorded in the county clerk's office of Pocahontas County, in Deed Book No. 25, page 297, and default in the payment of said note having been made by the said D. W. Loudermilk, and said Withrow McClintic having paid said note as endorser thereon as aforesaid, the undersigned Trustee, having been required by the said Withrow McClintic, will proceed at the front door of the court-house of Pocahontas County on the

5th Day of March, 1895,

(county court day) to sell by way of public auction, to the highest bidder,

for Cash,

the following property, or so much thereof as may be necessary to discharge said debt, and the costs attending the execution of this trust, to-wit:

One brown horse, one two-horse wagon, one set double harness, one-third interest in a threshing machine, and one-third interest in a sawmill, the property of the said D. W. Loudermilk. The other two-thirds interest in said threshing machine and sawmill belong to G. W. Beverage and F. Armstrong.

Also a certain tract or parcel of land containing eighteen acres situate in Pocahontas county, West Virginia, on Spruce Flat, being the same land conveyed by G. W. Beverage and wife to the said Susan J. Loudermilk by deed dated 16th day of April, 1891, of record in the clerk's office of the county court of Pocahontas County, in Deed Book No. 21, page 490, to which deed reference is here made for a full and complete description of said land.

L. M. MCCLINTIC,
Jan. 25, 1895.
Trustee.

Important to You

Having resumed the practice of veterinary surgery (limited) I will treat the following diseases in Pocahontas and adjoining counties, viz: ring-bone, bone-spavin, curb poliliv, fistula, and hives. Terms, specific and cures guaranteed. I am also general agent for Eldred's Liquid Electricity, which is specific for all kinds of fevers, sore-throat, cuts, sprains, bruises, bowel-troubles, and pains of every description, external or internal. Its use will prevent all kinds of contagious diseases. Address,

T. J. WILLIAMS,
Top of Alleghany, W. Va.

Peerless Feed Grinder.

Will last a lifetime. One horse power sufficient. Grinds any grain, either just merrily cracking it, or fine enough to make family meal. Every big farm is buying one. References, R. W. Hill, C. E. Beard, Lee Beard, G. W. Callison, Frank Hill, Geo. W. Whiting, Wm. Callison, and J. H. McNeil, Academy. Am. making a canvas of the county and will call on you in a short time. Price in reach of all. Agency for Pocahontas and Greenbrier counties. Eight sold in one day. For particulars, write to

R. M. BEARD,
Academy, W. Va.

HOME NEWS

—Dr. C. W. Eskridge has been appointed post master at Academy.

—DIED at Huttonsville, January 16th, Mrs. Hutton, aged mother of Col. Elihu Hutton.

—Mr. S. M. Gay is putting Dr. McClintic's cherry on the river bank at the Levi Gay wharf.

—The highest winds of the season prevailed last Friday night, smashing the glass front of the drug store.

—Mr. Withrow McClintic has just returned from a business trip to Ronceverte and Covington. On his return he came from Ronceverte to his home in eight hours.

—The New market Riding and Driving association, of Mingo, will have a steeple chase, on point to point race, on February 15th. The highest jump will be over a barrier of about five feet.

—Capt. Roske piloted an immense raft past Marlinton last Tuesday evening for Callison and Dr. McClintic. Quite a number of rafts have been tied up near the Falling Spring dam the past week waiting for a suitable tide.

—HARD! What is hard? To beat my prices—EASY! What is easy? To secure the bargains I am offering in Ladies' Wraps and Hats, Gents' Overcoats and Suits.

P. GOLDEN.

—Porter Kellison and John Atkins about a year since leased a piece of land on Buck's Run for six years, built a comfortable cabin, raised an excellent crop of corn, and one of the best gardens in the community. One head of cabbage weighed 27 lbs. The tomatoes were very fine. So these young men are keeping bachelors hall on good and full rations.

—Last week a fox driven desperate by hunger came right into this town and captured a chicken which was roosting in its owner's back yard. He returned the second night and pulled the tail feathers out of an old hen. The old hen seemed mortified to death the next day. Judging from his track, the fox was a big one.

—The town has two rival literary societies which are both flourishing. The members of the younger society, waylaid, and snowballed the president of the older society last Friday night. He took refuge in a convenient law office, and was kept treed until two o'clock next morning. It is exceeding painful to be snowballed on a dark night, when you are carrying a lantern.

—Attention is called to the advertisement of Mr. R. M. Beard, agent for the "Peerless Feed Grinder," found in another column. This is a machine which is selling like wildfire. It grinds any grain and will make good corn meal or crush corn in ear. With it Mr. C. E. Beard prepares feed for over a hundred head of cattle. Farmers can save the amount of cost in mill toll the first year.

—Mr. John Leviay, near Frankfort, died last Thursday at an advanced age, of general debility. He was a person highly esteemed in all the relations of life. For many years he was a conscientious member of the Presbyterian church.

Mrs. Dr. Sydenstricker and Mrs. Dr. Larsee of Hillsboro, are his daughters, and Mr. Alan Leviay, so well known about Marlinton, is one of his surviving brothers.

—The *Greenbrier Independent* has had some articles on the subject of protecting skunks. The argument in its favor are that it eats grubs and other enemies of grain and grass, which are set of partially by its habits of raiding the chicken-house. If natural history goes for any thing, the skunks friend though its habits do not command it to be taken into his house otherwise than figuratively. The reason its extermination is favored is because the skin of a skunk is worth about a dollar, if it is numerically black, and the fur against the killing of the animal would be easily endorsed. The animal would be harder to eradicate than the species of human blood, and the provider could be brought into court working with the small, where the party would connect him with one having the box.

—From the following local from the Hinton *Independent-Herald* it seems that none of the St. Lawrence Company's logs passed out into New River at the breaking of a part of the boom by the ice:

"A telegram was received here last Friday by Mr. Clarke James, stating that the Ronceverte boom had broken and 15,000 logs were coming down with the current. A great many of our boatmen anxious to earn the 40 cents each offering for their capture built large fires along the bank and sat up all night to await their coming. Alas! not a log came. Presumably they had all been stopped at Lowell and other points above. Several of our citizens earned quite neat little sums that day and the day before as the result of their skill in log catching and boating."

—For sale by E. H. Moore & Co., Academy, W. Va., corn, wheat and oats at the very lowest price for spot cash. Salt, \$2.25; Arbuckle Coffee, 25c; Coal Oil, 18c; Granulated Sugar, 15 lbs for \$1.00; Calicoes, 5 to 7cts; Gingham, 5 to 10cts; Best cotton, 8c; Cotton yarn 85cts a bale; Honey Drip Syrup, 45cts per gallon. Hats, Caps, Boots, and Shoes as low as the lowest. Every thing else in proportion.

—The first impressions of children who have never seen snow are often very comical. Mr. F. Hubbell, whose little daughter Fannie, a bright little girl of about four, is a citizen of the State of Mississippi. When she first saw the snow she ran to her mother to come and see the "Sugar on the roof."

—DIED: on Swago, Saturday, the 19th, inst., John Wiford, aged 57 years. He leaves a widow and four young children to mourn his loss. He was a member of the Methodist Protestant church, and was buried at Bethel church Monday afternoon. Services by Revs. Hart and Price.

Personal.

Capt. Smith is jollier than ever, since the company came out so well with the ice and logs.

—Mr. Peter Hill, of Jaoex, did not call at this office last week. No, not at all! But he sent in two dollars on subscription, and that answered the purpose every bit as well.

—Mr. Levi Gay is a man after our own heart. He supports this paper by taking quite a club list of subscribers, and ever and anon he contributes towards "the success of the TIMES."

—Dr. McClintic, and Wm. Callison, Esq., were here on Monday.

J. E. Barlow, Esq., of Edray, was in Marlinton on business as administrator of the Josiah Barlow estate.

—Mr. T. McClintic, treasurer of Bath County, is visiting his brother, Dr. McClintic, at Academy.

—Mr. Forrest Beard, of Academy, was in town on Tuesday.

—Messrs. N. J. Brown and E. L. Holt made a business trip to Marlinton on Tuesday.

—Youth and beauty enjoyed the hospitality of Mr. H. A. Yeager on the evening of the 23rd. Dancing and other amusements made up the attractions and all spent a most delightful time.

—J. A. Riley, Esq., of Green Bank, is in our town on Wednesday.

—Dr. Ligon, of Clover Lick, passed on his way to visit his daughter Mrs. McNeal who is recovering from an attack of pneumonia.

—Così on Locust Creek.

All the geologists will be thunderstruck to learn that coal has been found on the river ridges of the Greenbrier River, near Locust Creek, in the lower end of the county.

According to all their knowledge we might as well expect to find coal up a tree. Mr. T. F. Callison, of Locust, has been using a most excellent quality of coal which is found on the ridge overlooking the Greenbrier, the surface of which is covered with oak trees and laurel bushes.

The thickest vein is about thirty inches. The wood of the coal is in its burning which it does nicely, it being the principal fuel used by Mr. Callison this winter. Therefore we were told there was no coal in Pocahontas near on for Western boundary and that on the top of the hill would connect him with one having the box.

Hillsboro.

There is considerable sickness in this neighborhood at present.

Mrs. Bettie Burgess, wife of Mr. Wm. H. Burgess, of this place, died on the 15th, inst., of consumption, aged 62 years. During the last week of her illness she suffered intensely, but bore it with surprising fortitude. She was a member of the M. E. Church South, an exemplary Christian, a devoted wife, a kind and loving mother, possessing many noble qualities of mind and heart, she stood high in the estimation of all who knew her. The bereaved husband and children have the sympathy of the whole community in their affliction.

Little Charley son of Mr. and Mrs. Wesley Kinnison died on last Friday morning aged about 3 years. Gone from a world of pain and woe, gone from death—from sin's alloy. Gone from temptations wiles and oh! Gone! Gone from grief to endless joy."

Mattie Tibbs wife of Howard Tibbs (Col.) gave birth to a male child on the 15th, who lived until the next day and died.

On Wednesday the 16th, at the residence of James Goff near here, Mr. Wm. Pritt and Earlie Blankenship, were united in marriage by the Rev. A. C. Hamill. May the safe weather life's tempestuous sea.

Mr. Madison Woods, living on Hill's Creek does not have the trouble of putting up ice; a short distance from his house there is a large cave, the entrance to which is perhaps 20 feet wide, and 6 feet high; running through it there is a small stream of water also some pools of water which freeze solid during extremely cold weather making a large quantity of good ice which does not entirely melt away until the latter part of July. This cave has the usual complement of "domes" "chambers" "passages" "pits" etc. and in point of smoothness and uniformity of the same rivals all the caves in that section of country.

Mrs. Mary Sydenstricker and Mrs. Lillian Larsee left for Frankford on last Friday morning to attend the burial services of their father Mr. John Livesay who died on the 18th, inst.

Mr. Wm. Hulte while chopping wood last week made a missle and cut ably gash in his left foot.

Our Post Mistress, Mrs. A. S. Clark whose efficient management of the post office has often been the subject of remark, was removed recently because of her political views, and C. W. Eskridge appointed in her stead.

The Free School closed here on last Friday. "JENKINS.

Dunmore.

Cold and sticky.

We have on the sick-list Miss Lena McLaughlin, Mrs. N. D. Sweeker, Mrs. Geo. N. Tacy, and Mr. Ellis Curry. Dr. Austin is rendering medical aid.

Judge Moore leaves to-day for Clifton Forge, to be gone a month or so.

The little boys have had quite a bit of fun the last week or two, sliding down the hills. Judge Moore says it is not a violation of the constitution for a boy to slide down a hill and tear the seat out of his pants; provided he does not take him to the wood-shed and talk to him with a bed-slat. It is a little hard on the bed-slat sometimes.

Mr. Ed Kline moved this week to Frost. This leaves an empty house and blacksmith shop in town.

Rev. John A. Taylor has turned out to be a fireman, he is now fitting an engine.

Prof. J. T. Miller was in town last week. He will return in the spring and teach a singing school or two.

Prof. Samuel Adams has a singing class at Green Bank.

Mr. Wash Oliver was out to Beverly last week with a wagon. He had to shovel snow one day on Cheat Mountain.

Mr. Q. W. Poage was among our people last week looking after the horned tribe.

Miss Josie S. Walker closed her school here last week, and will return to her home in Lylesburg soon.

WANTED: some merchant in the Green Bank District to buy a stock of cross-cut saw files; say one-half dozen.

The Problem Department.

To use a homely but very suggestive expression, the editor of this department "busted" on a certain problem given recently. That problem was "What two numbers have for their product 353,925, and for their sum 1,254?" Owing to a typographical error, Mr. S. C. Austin of the Lewisburg Graded School answered that the problem was not capable of solution from the numbers given. Not knowing that the difficulty was occasioned by an error of the compositor, he blithely declared that it could not be solved except by guesswork, and so implicitly are we trusted that ninety-nine of a hundred of our readers didn't know what we were right. It turns out, though, that it is "an example of quadratic equations" from solutions received from Mr. Austin and from Mr. Richard K. Meade, the able journalist in the employ of the Hinton *Independent Herald*, and Mr. James Barnett, of Driftwood.

Information Wanted.

The following from Rev. A. C. Hamill will explain itself: Information wanted in regard to Ballard Brown who was a soldier in the Confederate army during the late war, and who died near the "Little Levels" in Pocahontas county, at the home of a widow lady by the name of either McCoy, or McClintic. The object of this inquiry is to ascertain if possible the place of his burial and locate his grave. Any one able to give information in regard to this, will please communicate with me at Academy, Pocahontas county, W. Va..

A. C. HAMILL.

Green Bank.

We are having very changeable weather this winter, which is very unhealthful, but the health of this part of the county is good.

Mrs. George Tacy, of Back Alleghany, is on the sick list, Dr. Austin attending physician.

Mr. Wardell Arbogast came home last week from Front Royal where he had been attending school, on account of fever in the school.

Mr. H. Nathan, of Academy, was in this vicinity, this week a few days buying cattle and sheep.

Mrs. W. H. Hull is able to be out about the house a little.

Mr. Ellis Curry has been confined to his room for some time with rheumatism, but is better at this writing.

Notice!

To my Patrons of Edray and vicinity.—I wish to say I am better prepared at present to meet your wants in everything that pertains to the merchantile trade than I ever was while in business at Edray, and will make it to your advantage to come to Marlinton to trade with me. I will make special bargains to repay you for your extra trouble.

Thanking you for your past patronage, and soliciting a continuance of same, I remain, yours anxious to please,

P. GOLDEN,

Marlinton W. Va.

Order of Publication.

AT rules held in the Clerk's office of the Circuit Court of Pocahontas, on the first Monday in January, 1895.

R. S. Turk, Trustee, Plaintiff,

vs.

Jannie B. Skiles, et als., defts.

The object of the above styled suit is to enforce a vendor's lien for three bonds of Jannie B. Skiles of the following dimensions and dates, viz: One for \$500, dated the 5th of April, 1886, due fifteen months after date, with interest after ninety days from date.

One for \$500, dated 5th of April, 1886, due twenty seven months after date, with interest after ninety days from date;

One for \$500, dated 5th day of April, 1886, due thirty nine months after date, with interest on the same after ninety days after date.

For which bonds a vendor's lien is retained in a deed from the defendant James B. Aperson and his wife to the defendant, Jannie B. Skiles, of date the 5th day of April, 1886, and recorded in the clerk's office of the County Court of the said Pocahontas County, as of April 6, 1886, which bonds aforesaid were assigned and transferred to the plaintiff as Trustee, on the 7th day of September, 1886, which vendor's lien aforesaid rests upon two parcels of land lying in the town of Marlinton, said county, and are estimated to contain one-half acre each, and to enforce which vendors lien a sale of the land will be asked to be decreed by the said Circuit Court.

And it appearing from an affidavit filed that the defendants, Jannie B. Skiles, Thomas M. Skiles, and Richard Baldwin are non residents of the State of West Virginia it is ordered that they do appear here within one month after the date of the first publication of this order and do what is necessary to protect their interest in said suit.

Witness, J. H. Patterson, Clerk of said Court, this 11th day of January, 1895. J. H. PATTERSON,

H. S. TURK, p. 4.

How true the saying of Carlyle: "All honest men will bear watching." It is the rascals who cannot stand it." — Indianapolis Journal

DIPHTHERIA CURE.

WONDERFUL NEW REMEDY FOR A TERRIBLE DISEASE.

Dr. Roux, the French Savant, Tells How the Serum of the Blood of Horses Has Saved Thousands of Human Lives in France.

In a comfortable laboratory, flooded with sunshine, in the Pasteur Institute, in Paris, a New York World correspondent found Dr. Roux, who is the hero of the hour from the fact that he has discovered a cure for diphtheria.

His dark, serious face lighted up with a winning smile as the correspondent saluted him as "the man who is saving 30,000 lives a year in France alone."

"Pardon," he said, quickly, "you exaggerate. It is true that diphtheria and croup claim more than 30,000 victims every year in this country. It is also true that out of 116 children whom I have recently treated for one or the other of those terrible maladies

I will repeat substantially what I said at the Medical Congress at Budapest the other day. My co-workers, MM. Martin and Chaillou, and I, maintain, after a series of careful experiments extending through three years, that by the use of the serum separated from the blood of horses which have been previously vaccinated against diphtheria we have succeeded in lowering in such large proportion the mortality of children attacked by diphtheria or croup, that the malady may be considered as conquered. We are beyond presumption now. But what we wish specially to do is to impress upon the minds of mothers everywhere the need of flying at once to the remedy, the moment the diphtheria declares itself. Otherwise we shall continue to have such discouraging results as at the Troussseau Hospital.

"This is what should be done," he went on. "When a child complains of a sore throat an examination should be instantly made. If the mucous surface shows little white spots scattered over it a physician should be called without delay. The white spots may be indications of a simple quinzy,

DRAWING BLOOD FROM THE JUGULAR OF A HORSE.

I have saved 116. That is, we think, a very pretty reduction of the mortality from the old rates."

"It is so wonderful that the mothers of France ought to build you a monument of gold."

The smile swept over the dark face again. "Yet we are only on the threshold of success. At the Troussau Hospital, where the mortality among the children used to be sixty-three per cent.—think of it, monsieur, sixty-three per cent—it has been reduced since the introduction of our treatment of diphtheria and croup to twenty-four per cent."

"At the Hospital of the Enfants Malades," continued the doctor, "where I have been experimenting with my—shall I call it my discovery?—for three years, the average mortality has been lowered from eleven to one per cent. This is a good confirmation of the value of our remedy."

The young savant's face was now aglow with enthusiasm. Here was a man who took as much pride in saving life as successive generals take in destroying it.

The World correspondent asked Dr. Roux to tell how he came upon the astonishing and beneficial discovery. "Tell how it is that you, pupil of the great Pasteur, have gone ahead of your master. If I were he I could find it in my heart to be jealous of you!"

The Doctor held up his hand with

or they may be the first symptoms of croup.

"In either case, the physician should at once give the child a subcutaneous injection of the anti-diphtheric serum. If the attack is one of quinzy simply, the remedy will do no harm. If it is diphtheria, the serum will infallibly effect a cure."

"Infallibly?"

"I have just told you that the statistics at the Hospital of the Enfants Malades show that since the use of the serum in diphtheria cases where there is no complication with other maladies, the average of mortality has been lowered from eleven to one per cent. Contrast this with nearly seventy per cent. of mortality where the old-fashioned treatment alone is used."

Dr. Roux is deeply in earnest. "Give us just the chance that we ought to have—fair play against the disease," he says, "and we will conquer it every time."

The correspondent remarked that diphtheria is a disease about which every mother has a different theory.

"There are many vulgar errors concerning it," said the Doctor. "Nine times out of ten diphtheria does not kill, as is generally supposed by suffocation. The false membranes which develop at the back of the throat rarely cause total obstruction of the respiratory canal, and even if they did, tracheotomy could save the patient."

The Doctor held up his hand with

poor children here when the family doctor says that the attack has become serious for him and that the patient must go to the hospital), the remedy

is to send to the hospital, the remedy

is to send
